TO WHOM IT MAY CONCERN-

We have fitted the De Bug Decontamination Units to two of our Volvo F16 prime movers and have now been operating them for over six Months. One of these trucks had previously had a problem with clogging fuel filters and required the fuel filters to be changed every 5,000 Kms to maintain performance.

Since fitting the De Bug unit we have run the filters to 45,000 Kms as a test, without any problems. This proves beyond doubt that these Units do work and the long term benefits to the fuel system are obvious, as well as the constant performance.

I would recommend these units to anyone wishing to improve their operating efficiency.

Yours sincerely

Tony Teasdale

DIRECTOR. 21/3191
